New features in version 7.1.487.3 of April 2024

Documentation

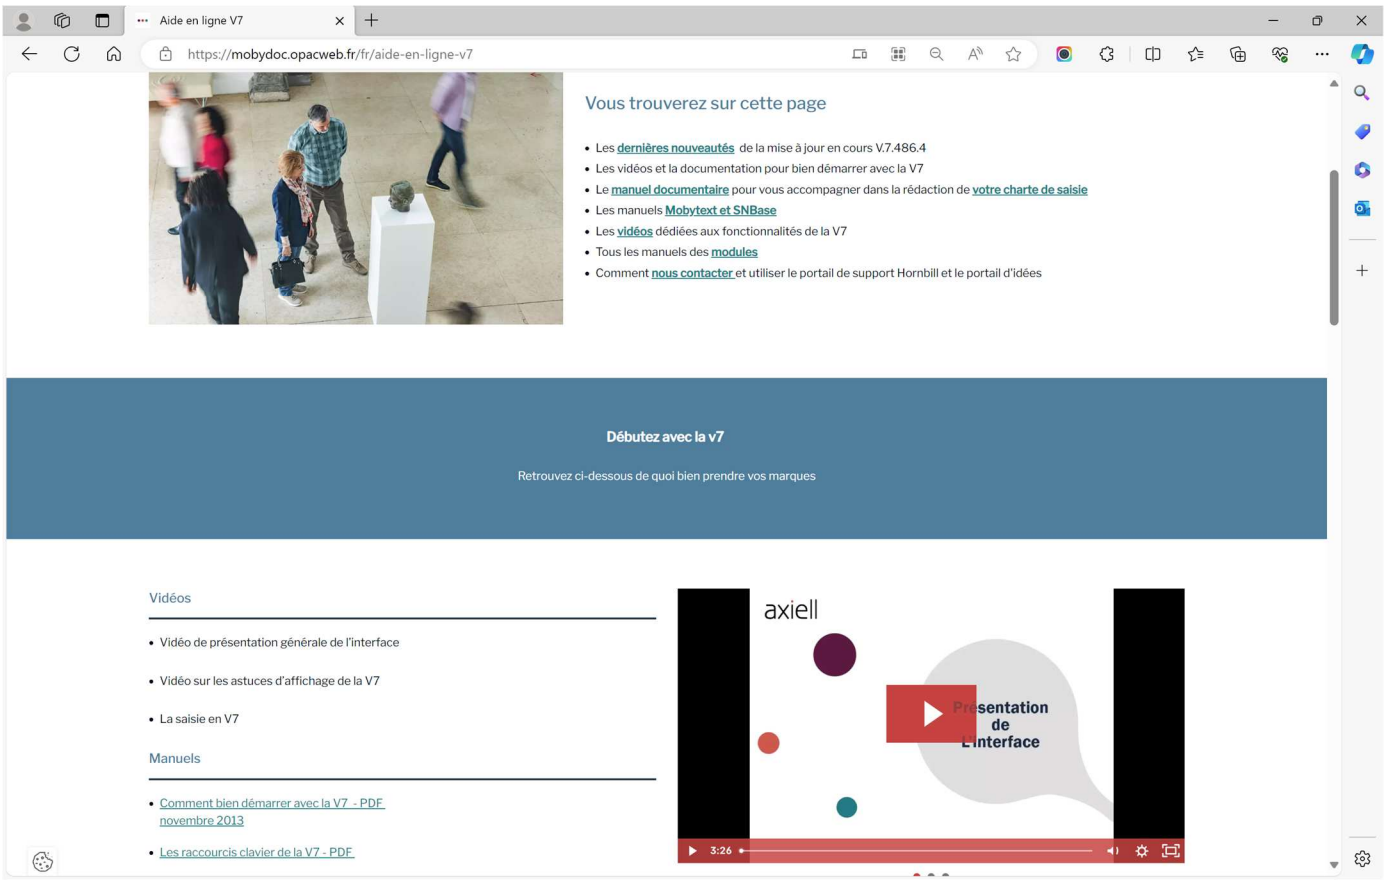

New manuals :

- Classification import
- Location import

The following manuals have been updated:

- Forms editor manual
- Manual Remote entry (Saisie déportée GB)

The online help page has been simplified to make it easier to access resources: Online Help V7 (opacweb.fr)

Common functionalities

Fusion *(Request Aha!)*

In response to numerous requests from users, the Merge tool now makes it possible to merge terms even if they have a generic in the case of deletion.

As with manual deletion, deletion is only possible if only the Broader term field is filled in the Context area. If the term has one or more specific terms, it will not be merged.

The message "Impossible to process 'the term': context zone, a field other than Boarder term is filled in" appears in two cases:

- When at least one field other than Broader Term is filled in
- When the Context field contains one or more fields that are not Broader term

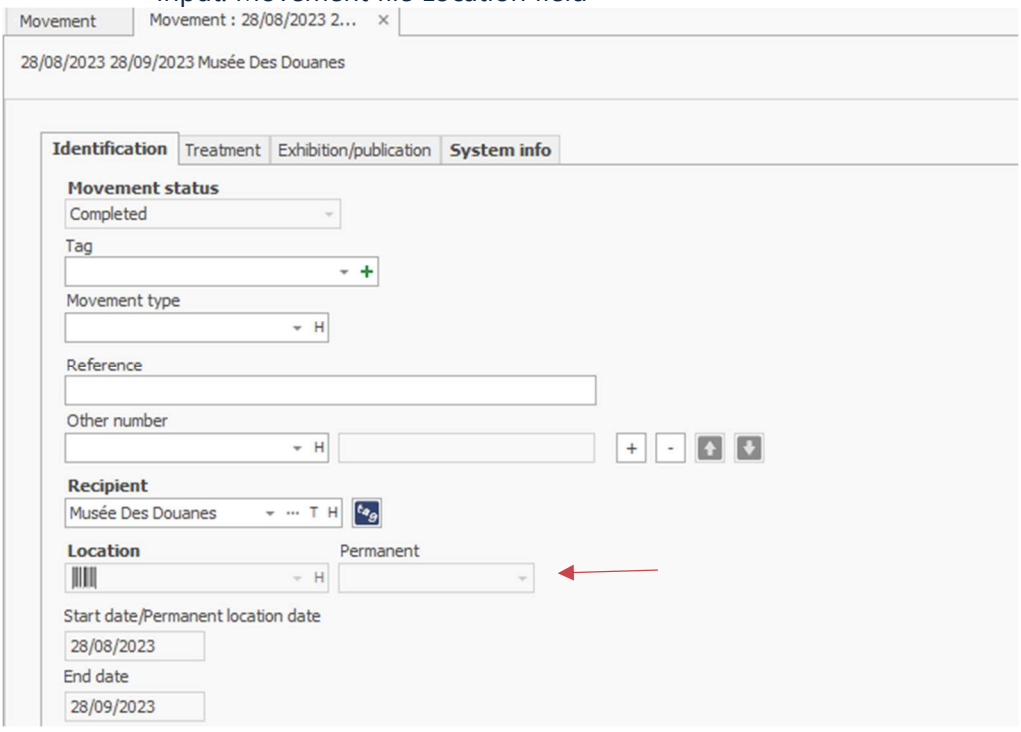

Module

Marking objects

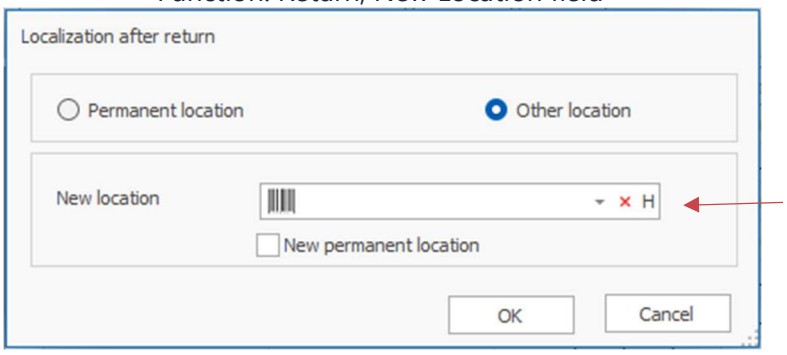

Introduction of QR codes for the Movements module

QR codes can now be scanned in the following situations:

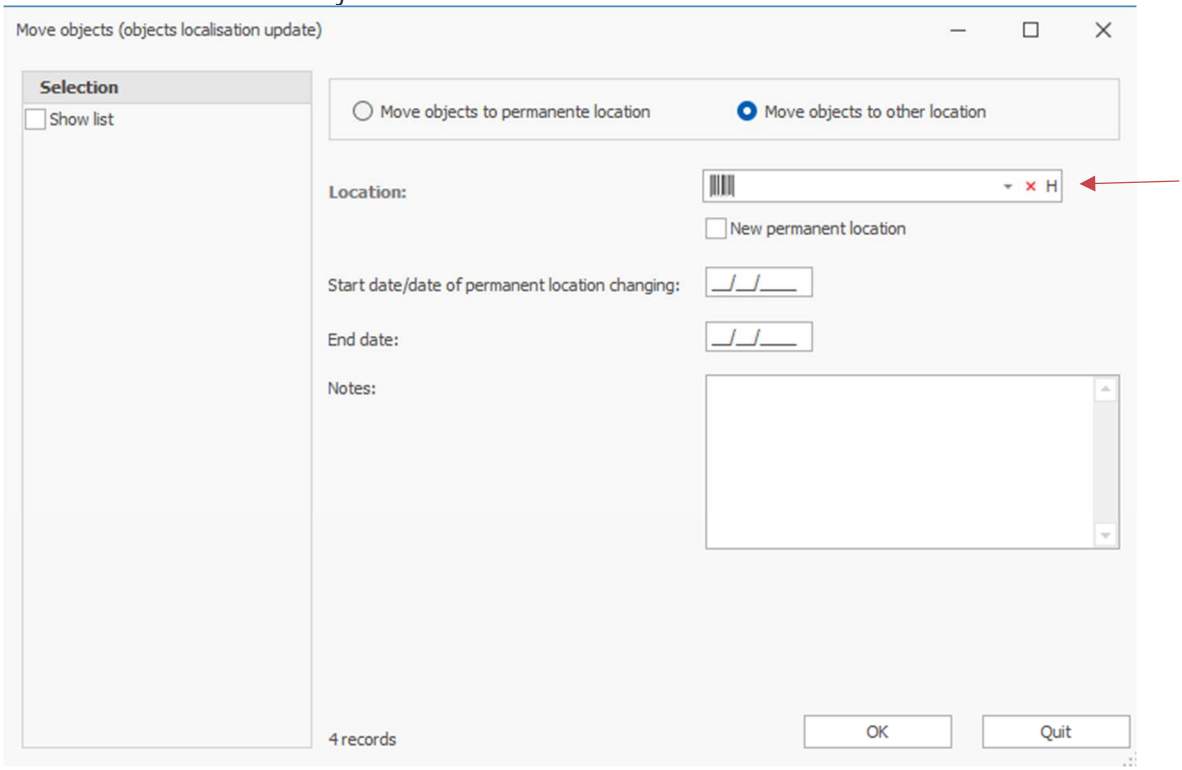

- Input: Movement file Location field

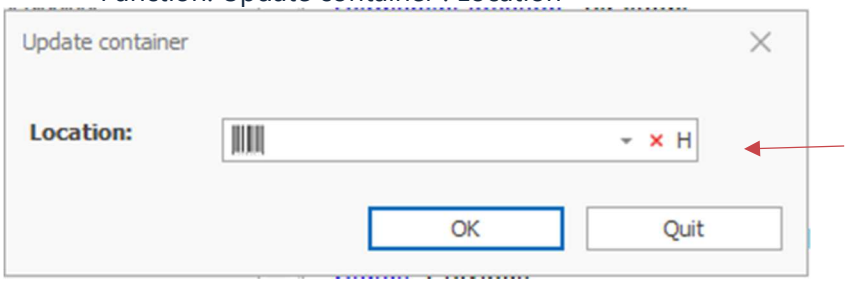

- Function: Return, New Location field

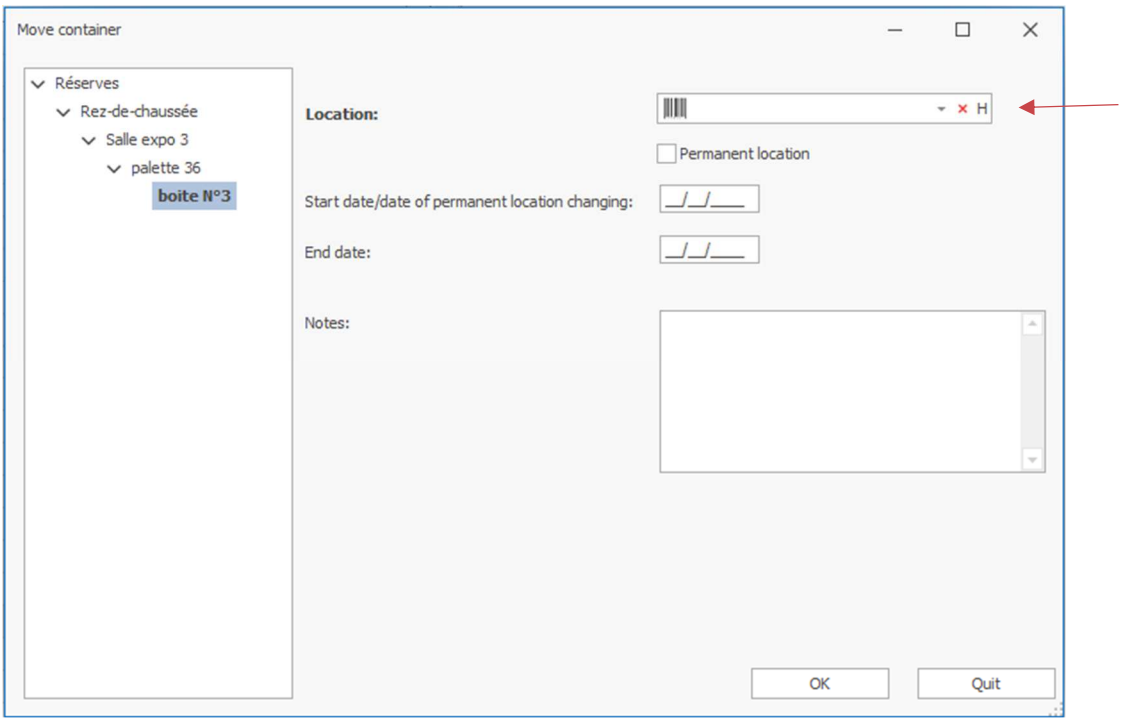

- Function : Move objects : Locatation

- Function: Update container : Location

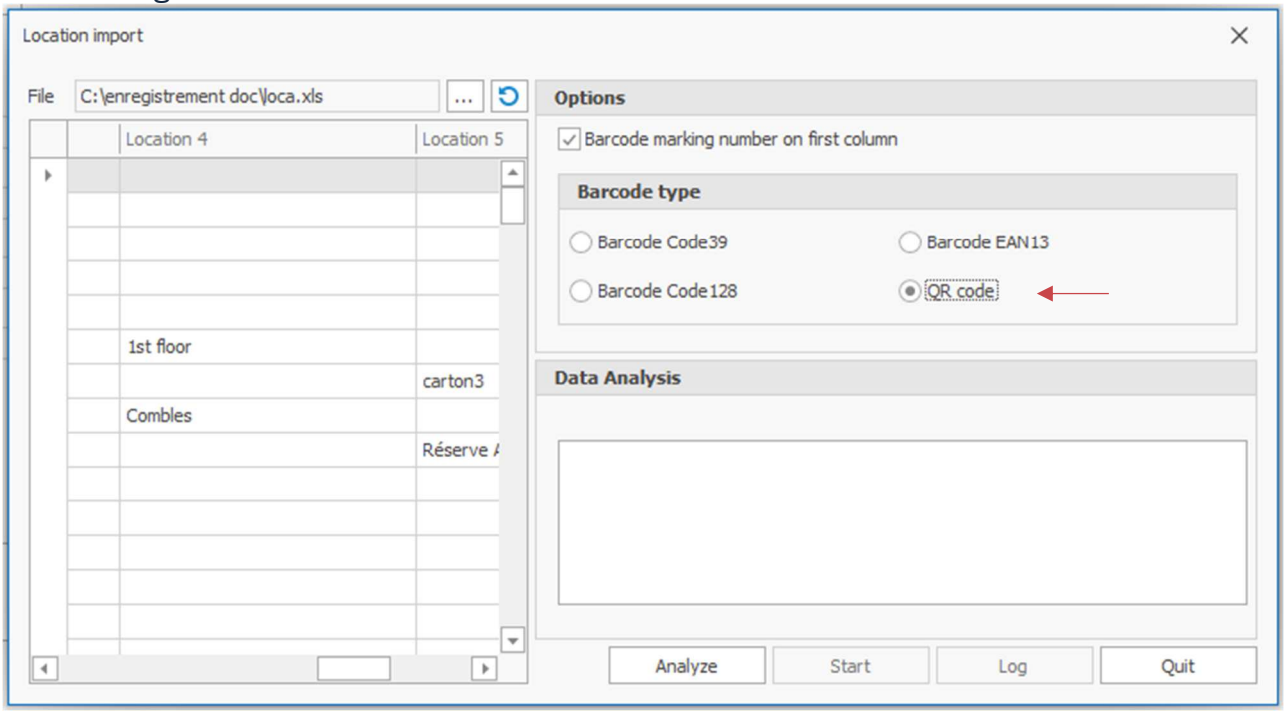

- Function : Move container : Location

Import new records and Location import functions: Add QR code

The QR code can now be selected as the barcode type when importing files for the :

- Import new records (Inventory or Specimen), to fill in the Marking number field and therefore associate barcodes in these new records.
- Import of Locations, used to fill in the Marking number field and thus associate barcodes with existing or new Location records.

SNBase

Saisie déportée (Remote) input has been made easier to manage for importing/exporting Latitude/ and Longitude fields.

The point contained in the coordinates is handled on reimport. As a reminder, in previous versions it had to be replaced by a comma to be processed.

Bug

Saisie deportee (Remote entry), creation of a new Institution/department :
It works in the same way as Importing new notices
The management of Institutions/Departments has been modified. It is now no longer possible to create a new value for this field via import.
If the file contains a new Institution/Department, it will not be included in the import and the field will be emptied for the Inventory/Specimen record(s) concerned.

SNBase, Refresh term deletion on search result :
The problem has been corrected. The search result in the Classification file is updated again after a record has been deleted.

New features in version 7.1.486.4 of January 2024

Documentation

The following manuals have been updated:

- Manuel Wmédia
- Manual Remote entry (Saisie déportée)
- Forms editor manual

You can find all our documentation online at : V7 online help (opacweb.fr)

Common functionalities

Saisie deportee (Remote input)

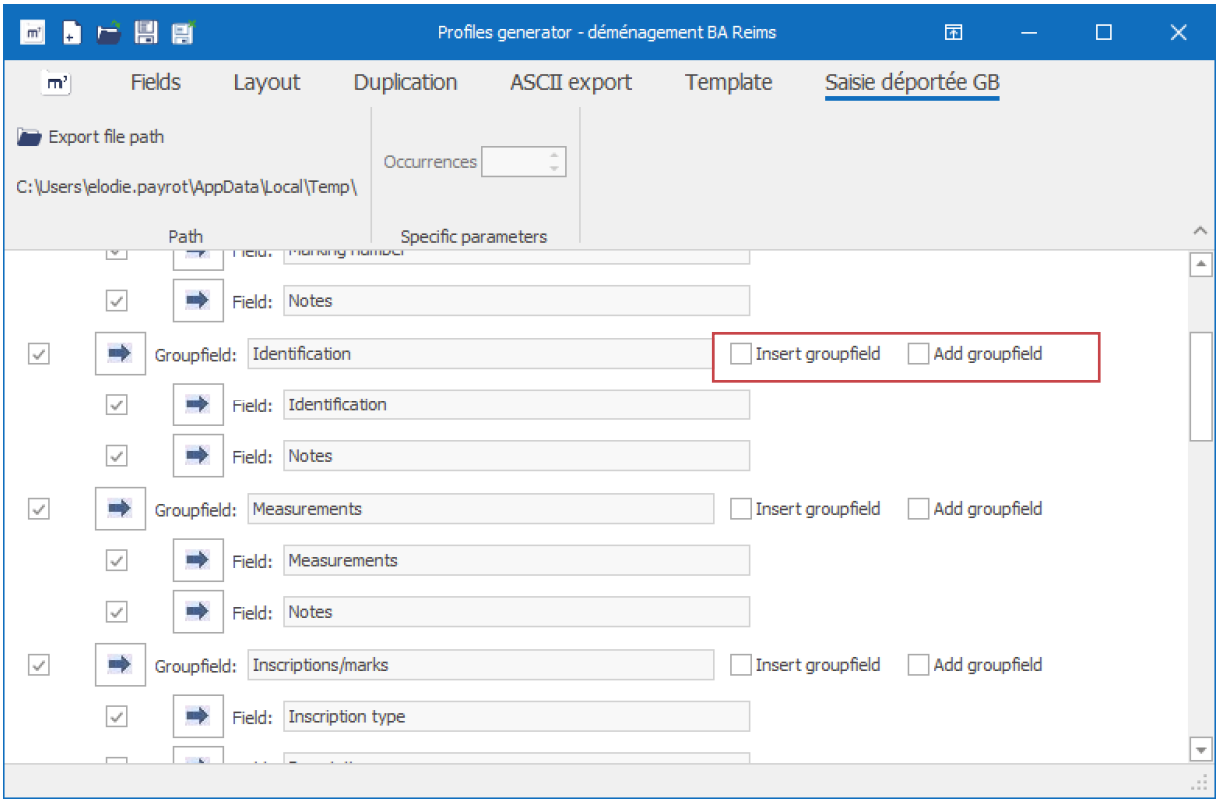

Work is continuing on simplifying the creation of remote input (Saisie déportée) files.

Two new features have been added to the Remote data entry tab, which was added in the last update.

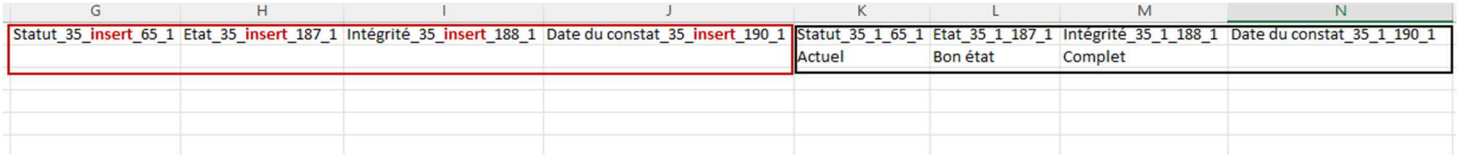

Insert/Add occurrence

A new option is now available: you can set up a one-click parameter to add a new zone occurrence (empty zone) before or after a zone that has already been filled in.

To the right of each repeatable zone you will find the Insert occurrence/Add occurrence option.

Insert occurrence: Used to insert a new occurrence in the first position (at the top of the zone). In the file, empty columns appear before the populated occurrences. These columns contain the fields that have been set. These columns are easy to identify because their heading contains "Insert".

G	H	I	J	K	L	M	N
Statut_35_insert_65_1	Etat_35_insert_187_1	Intégrité_35_insert_188_1	Date du constat_35_insert_190_1	Statut_35_1_65_1	Etat_35_1_187_1	Intégrité_35_1_188_1	Date du constat_35_1_190_1
				Actuel	Bon état	Complet	

Add an occurrence: Used to add a new occurrence in the last position (at the bottom of the zone). In the file, empty columns appear after the occurrences entered. The columns contain the fields that have been set. These columns are easily identifiable because their heading contains "add".

A	B	C	D	E	F
Export GUID	Numéro d'in	Numéro de dépôt_1_1_68_1	Désignation	Mesures_15_1_106_1	Mesures_15_add_106_1
8488836a-6f71-458d-a527-e	823.8.6		Buste de Dia	Hauteur en cm##10,5	

Please note:

- Adding and inserting a zone can be combined in the settings.

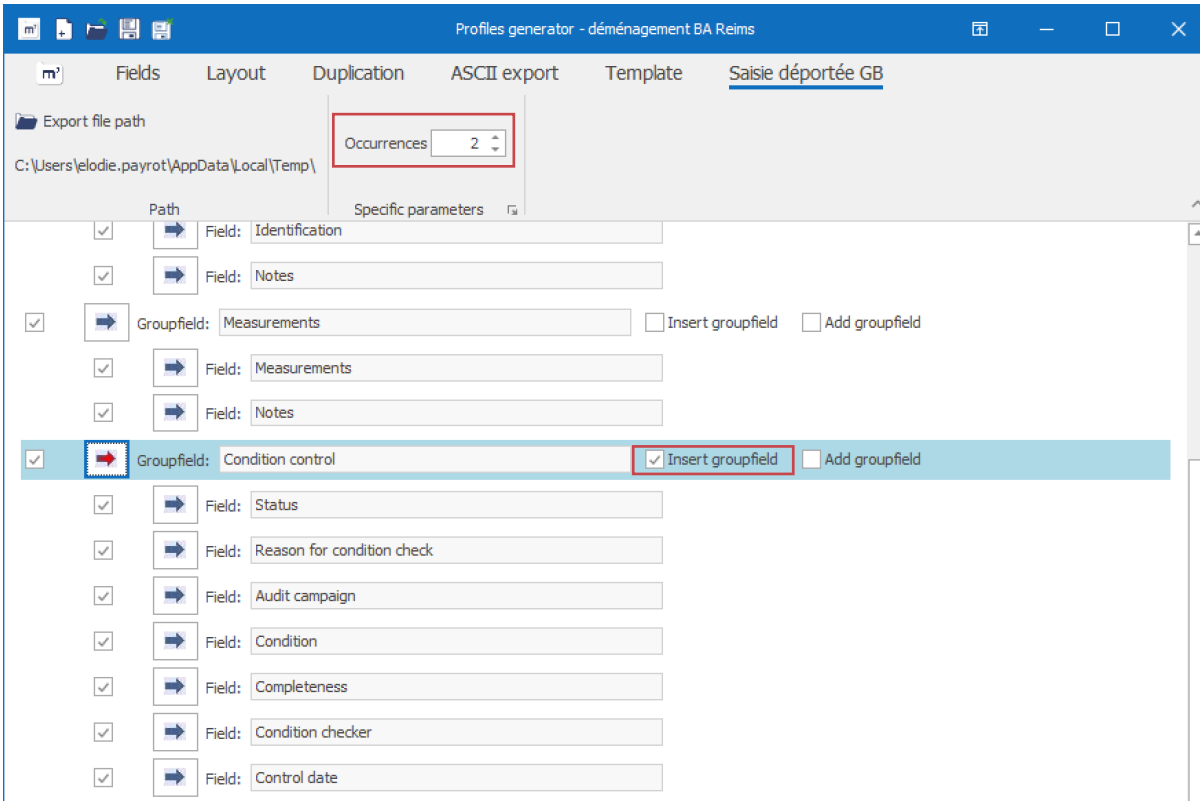

This gives :

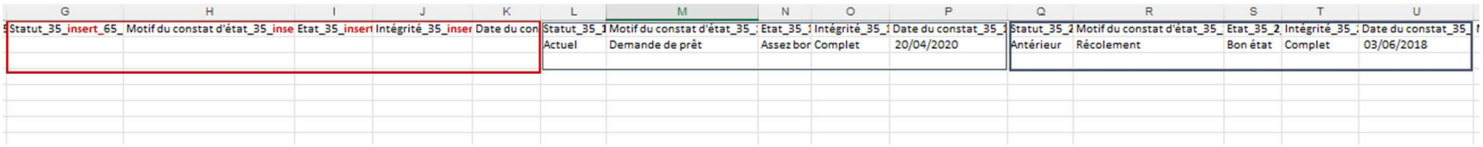

S	T	U
Multimédia_4_**insert**_10_1	Multimédia_4_1_10_1 U:\Images Mobydoc\200192a.jpg	Multimédia_4_**add**_10_1

- Insert/Add can be added to the number of occurrences setting.

For example: Set up the export of two occurrences for Status report while inserting a zone occurrence.

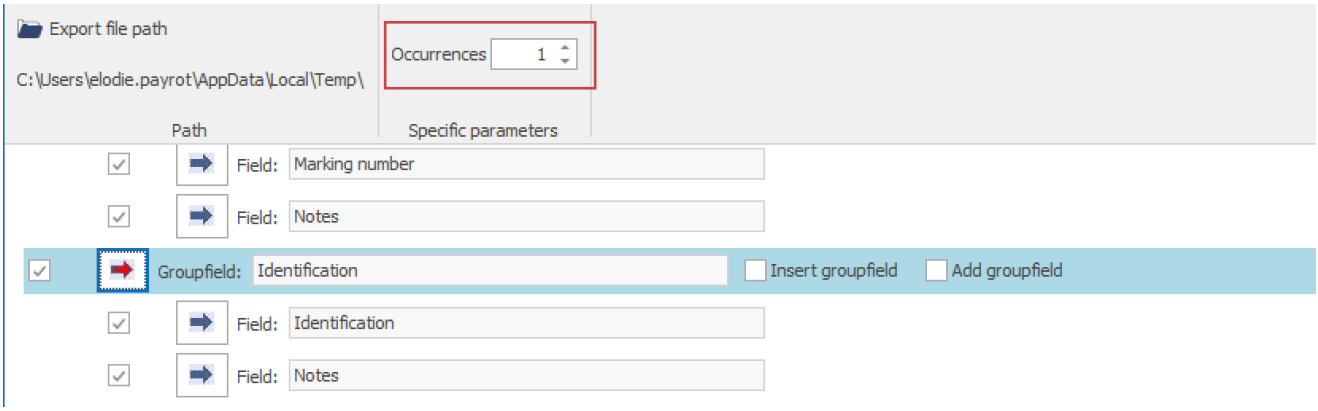

With this setting, a file is generated with the last two status reports and upstream columns enabling a new status report to be entered when a zone occurs for the first time.

Configuring hits

The way in which hit parameters are set has been modified and enriched:

- The default number of occurrences is now set to 1 instead of 999
- The value 999 now corresponds to all the occurrences entered in the records and no longer to the first occurrence.

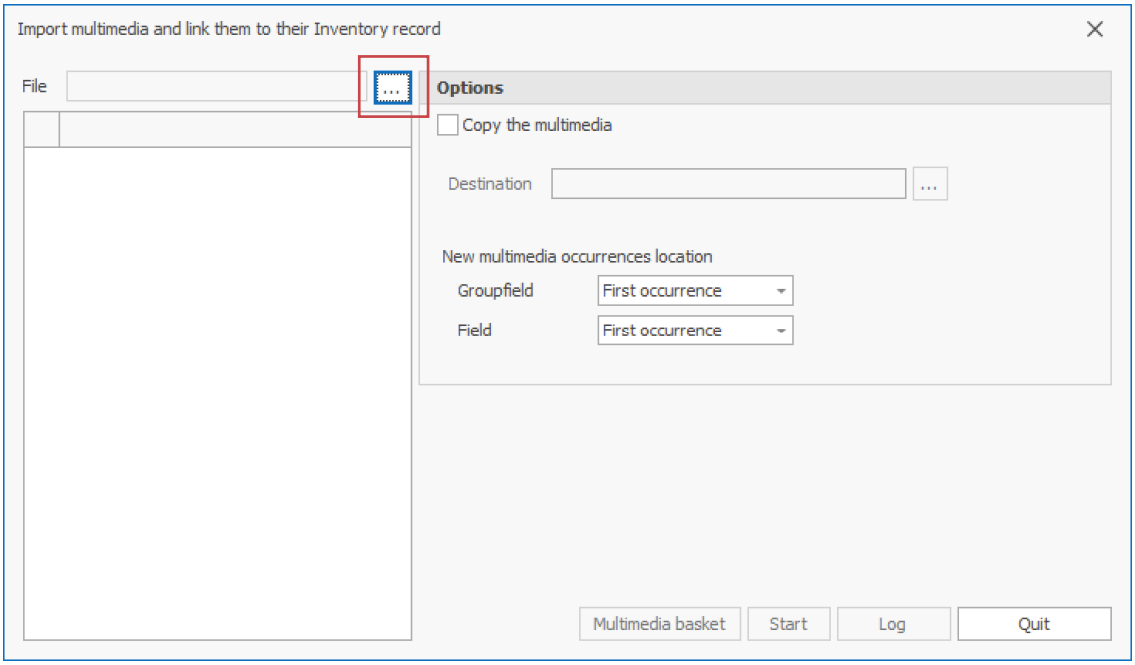

Module

Wmédia

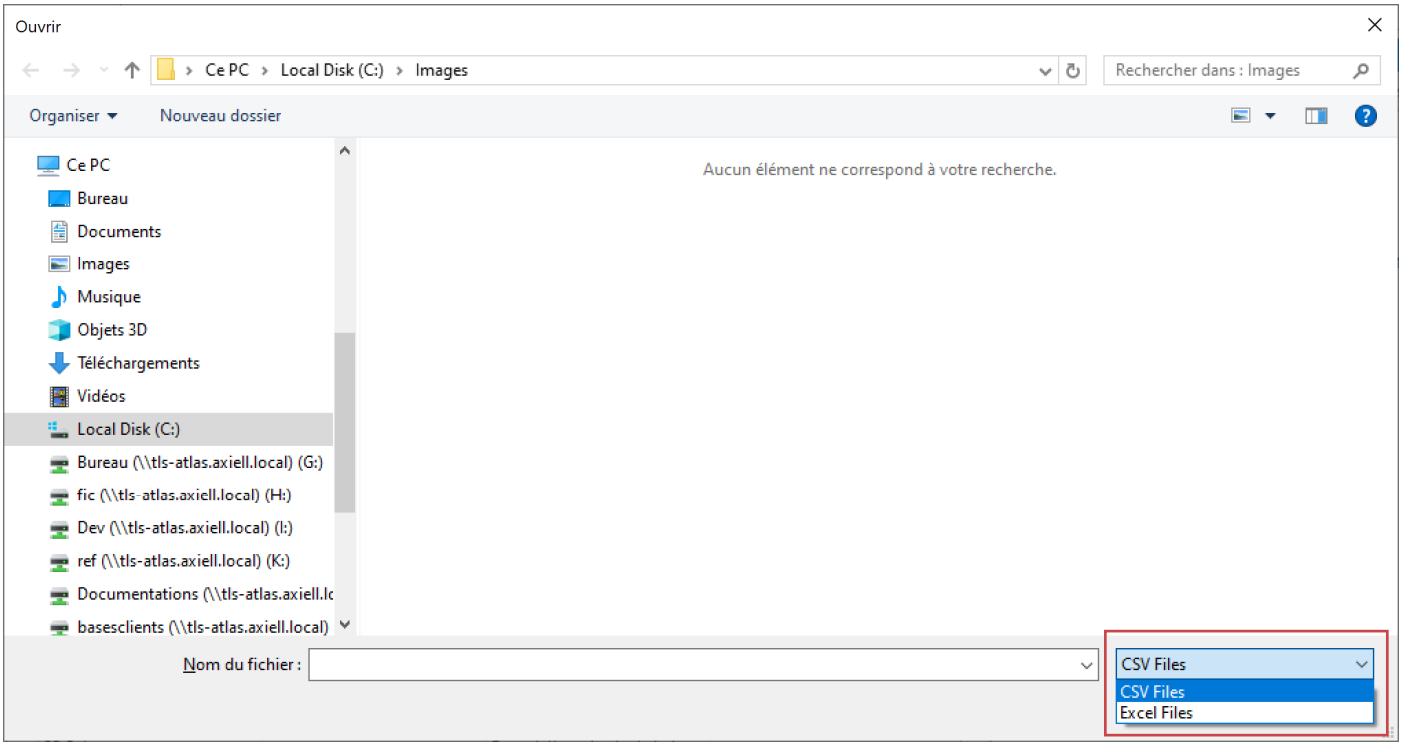

New formats are accepted for multimedia imports. As well as importing new records, xls and xlsx formats can now be imported in addition to the CSV format.

The file type must be selected in the import window:

- Click on the 3 dots button in the Import Multimedia window.

- The file selection window opens, and to the right of the File name field is a drop-down list from which you can choose the type of extension.

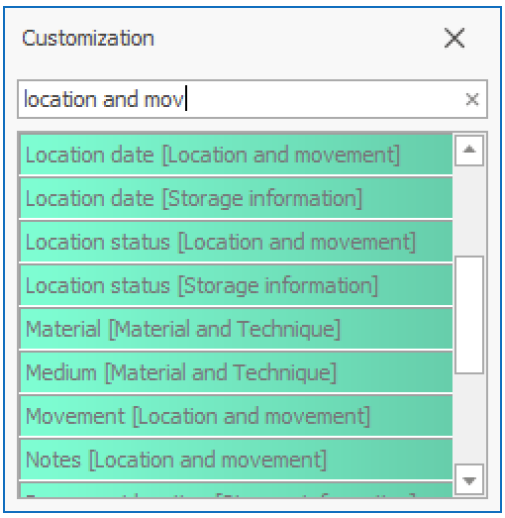

Control room

New in the Control Room, new columns can be added on the fly.
For the Locations and movements, Recipient/Borrower and Location fields in the Locations and movements zone, there are two ways of displaying fields:

- Fields linked to the first zone occurrence
- Fields related to the occurrence of a zone with the status Current -New-.

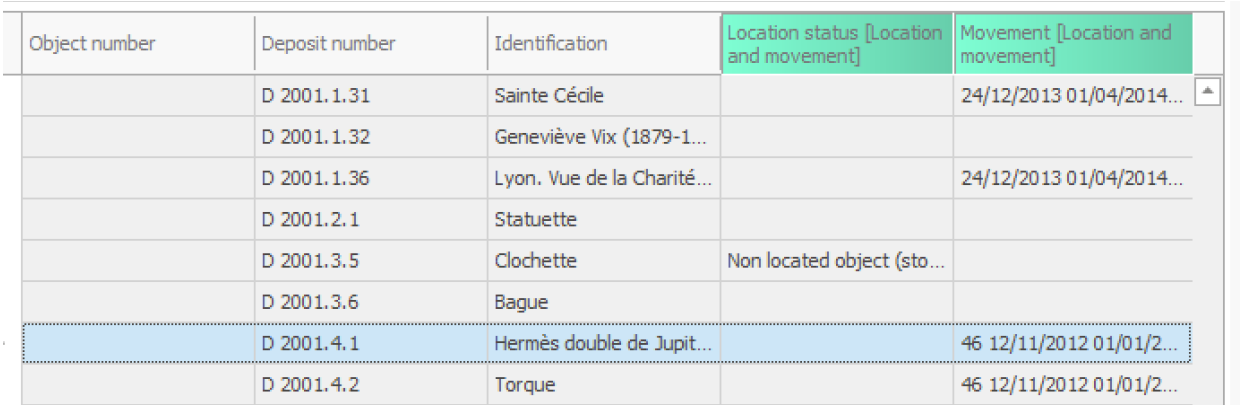

In particular, this makes it possible to see where the object is currently located from the centre pane, even if the object has occurrences in Planned status.

To select these columns, in the Customise window in the centre pane, select the field headings for which the term "Current" has been added. The column is added in the same way as the other columns.

These columns can be displayed in the Control Room on the :

- Baskets
- Document base, Specimen or Photo copy files
- In the records window attached to a movement

Object number	Deposit number	Identification	Location status [Location and movement]	Movement [Location and movement]
	D 2001.1.31	Sainte Cécile		24/12/2013 01/04/2014...
	D 2001.1.32	Geneviève Vix (1879-1...		
	D 2001.1.36	Lyon. Vue de la Charité...		24/12/2013 01/04/2014...
	D 2001.2.1	Statuette		
	D 2001.3.5	Clochette	Non located object (sto...	
	D 2001.3.6	Bague		
	D 2001.4.1	Hermès double de Jupit...		46 12/11/2012 01/01/2...
	D 2001.4.2	Torque		46 12/11/2012 01/01/2...

Traceability

The Auto-increment barcode tool is now active on a single record and not just on a selection.

As with multi-selection, the type of barcode can be chosen from the four available (Code39 barcode, Code128 barcode, EAN13 barcode and QR code). If a barcode of this type has already been assigned to records, the following value is proposed by default.

SNBASE

Remote input

The import tool for remote data entry has been adapted to the Specimen file.

The "Remote entry" function allows you to make changes to Specimen records already in the database in a spreadsheet-type file. The following actions are possible: adding a field or zone, modifying a field or zone and deleting a field or zone.

To do this, a file is generated using the software, based on a profile of the desired records. This file then needs to be re-imported with the changes made.

A Remote Data Entry manual is available on the online help page.

Bug

Programme administrator :
User groups who did not have creation rights for a file could still create a new record by right-clicking. This problem no longer exists.

WMedia :
Some .csv files were not accepted for import, and an incorrect format message appeared when they were selected. This problem has been corrected.
